Regin Kristiansen and Svein Østerhus**

Technical Report No.: 00-03

Tórshavn

November 2000

Introduction

This report documents 9 Aanderaa Current Meter records associated with ADCP deployments in Faroese waters in 1994 - 2000. The measurements were acquired at 2 standard mooring sites, shown in Figure 1. The deployments are listed in Table 1. Each deployment is identified by an 8-character label where the first four characters indicate the site (Fig. 1) while the last characters show year and month of deployment.

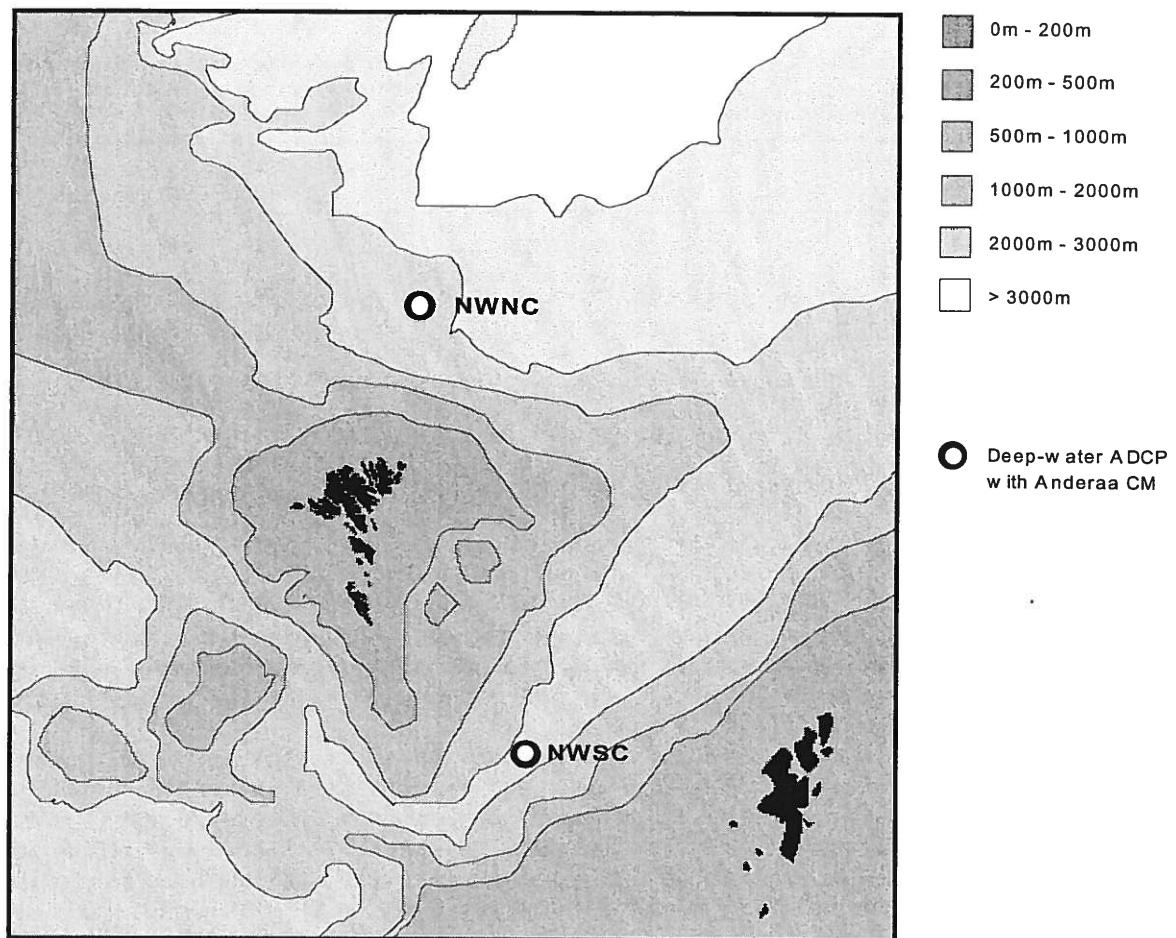

Figure 1. Standard ADCP/Aanderaa mooring sites in Faroese waters superposed on a map with the bottom topography. The two sites are indicated by four-letter labels.

As indicated in Figure 1, there are two standard ADCP moorings sites with an Aanderaa Current Meter on the mooring line. The depth of the ADCP's has been quite constant for each deployment, but the depth of the Aanderaa Current Meters has varied in the first years, though it has been almost constant since 1997. For all the deployments the Aanderaa Current Meters have recorded the velocity at 60 minute's intervals. All the Aanderaa Current Meters have recorded speed, direction and temperature, while some also have recorded conductivity and a single Current Meter has recorded turbidity.

Quality control and calibration

After acquisition, the data series have been calibrated using calibration data from the manufacturer. In the Aanderaa current meter, several speed and compass readings are taken during a sampling interval, while the temperature, conductivity and turbidity readings are taken once at the end of the interval only. At the end of the interval, the instrument stores a vector average of the velocity for the whole sampling interval, as well as the temperature, conductivity and turbidity readings. In the data files, the time of each record is the middle of the speed-averaging

interval. In the calibration procedure the velocity direction has been corrected for magnetic deviation, by adding a constant. The actual correction for each deployment is stored in the header of the data file. The data have been quality controlled by a standard procedure based upon data variation with time in relation to neighbouring values (spikes). The editing has been done manually using an interactive graphical software package developed by the Faroese Fisheries Laboratory (FFL), based upon MATLAB. We have not calibrated salinity and the turbidity is not edited.

Table 1. List of Aanderaa Current Meter deployments in the period 1994 - 2000 with information on bottom depth (m), interval (min), duration, Instrument depth (m) and parameters. Possible parameters are temperature (tmp), speed (spd), direction (dir), narrow temperature (Ntmp), salinity (Sal) and turbidity (Turb).

Deployment	Bottom depth	Int. min.	Valid data period	Dur. days	Instr depth	Parameters
NWNC9410	1730	60	1994 10 22-1995 02 17	118	1678	Tmp, Spd, Dir

NWSC9606	1066	60	1996 06 15-1997 05 23	342	759	Tmp, Spd, Dir
NWSC9708	1068	60	1997 08 01-1998 06 15	318	763	Tmp, Spd, Dir, Ntmp, Sal
NWSC9907	1071	60	1999 07 04-2000 06 20	351	764	Tmp, Spd, Dir, Sal, Turb

Report format

For each deployment, the report contains several pages, beginning with a page that has a drawing of the mooring and details of the deployment. After that there is a text page, which lists metadata information in the header and shows the list of parameters in the data file with a tally of the number of records flagged and not flagged for error in each parameter. Any comments to the data are then listed.

The rest of the text page describes features of the velocity observations in the series. First is shown the residual current, defined as the vectorial average of all non-flagged records. Next are shown the results of tidal analysis on the series which are of sufficient length. The number of records interpolated before the analysis is listed as well as the number that could not be interpolated (too large gap). Since all the deployments have 60 minutes intervals all analysis are performed on unfiltered data. 15 of the dominant constituents are listed and for each constituent, amplitude and Greenwich phase lag are shown for the east (E-ampl and E-gpl) and the north (N-ampl and N-gpl) velocity components respectively, followed by the characteristics of the tidal ellipse, its major and minor semi-axes, the inclination (Incl) of the ellipse, its Greenwich phase lag (Grphl), and whether it rotates cyclonically (C) or anticyclonically (A). The definitions of the tidal ellipse parameters are shown in figure 2. The tidal constants were computed by an adapted version of the Foreman FORTRAN package.

Finally, on the text page, is a table listing the directional current distribution as relative numbers of observations in parts per thousand. The table also lists for each direction interval, the relative flux, the average speed and the maximum speed. Then 1-2 pages show plots of the listed parameters as a function of time. Finally, there is a page

showing the progressive vector diagram. For one deployment (NWSC9606) the progressive vector diagram is not included, because of large gaps in the series and for one deployment (NWNC9410) only the first part of the series is included.

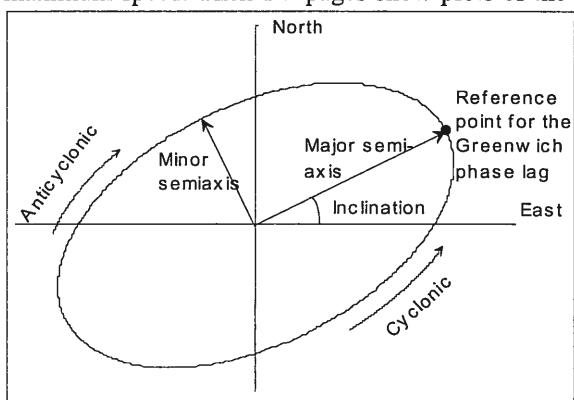

Figure 2. Parameters of the tidal ellipse for a given constituent. The reference point for the Greenwich phase lag is always chosen to be above the east-west axis.

Comments

The instrument has two temperature readouts. One Low range (-5 to +11 degr. C) placed in column 7 and one Narrow range (-1.4 to +1.4 degr. C) placed in column 11. The Narrow range temperature is used for the salinity calculations. Salinity is not calibrated and absolute values are not reliable.

Column 9 : Direct	8397	0
Column 10 : Salt	8396	1
Column 11 : N-temp	8397	0

Comments

The instrument has two temperature readouts. One Low range (-5 to +11 degr. C) placed in column 7 and one Narrow range (-1.4 to +1.4 degr. C) placed in column 11.

The Narrow range temperature is used for the salinity calculations.

Salinity is not calibrated and absolute values are not reliable.

The time-tag clock in the instrument is drifting slightly so the actual time for the last record is 2000 06 16 06 48.

Residual current: 21 mm/sec towards: 172 degrees

NWSC9708
Instrument: Aanderaa 10067

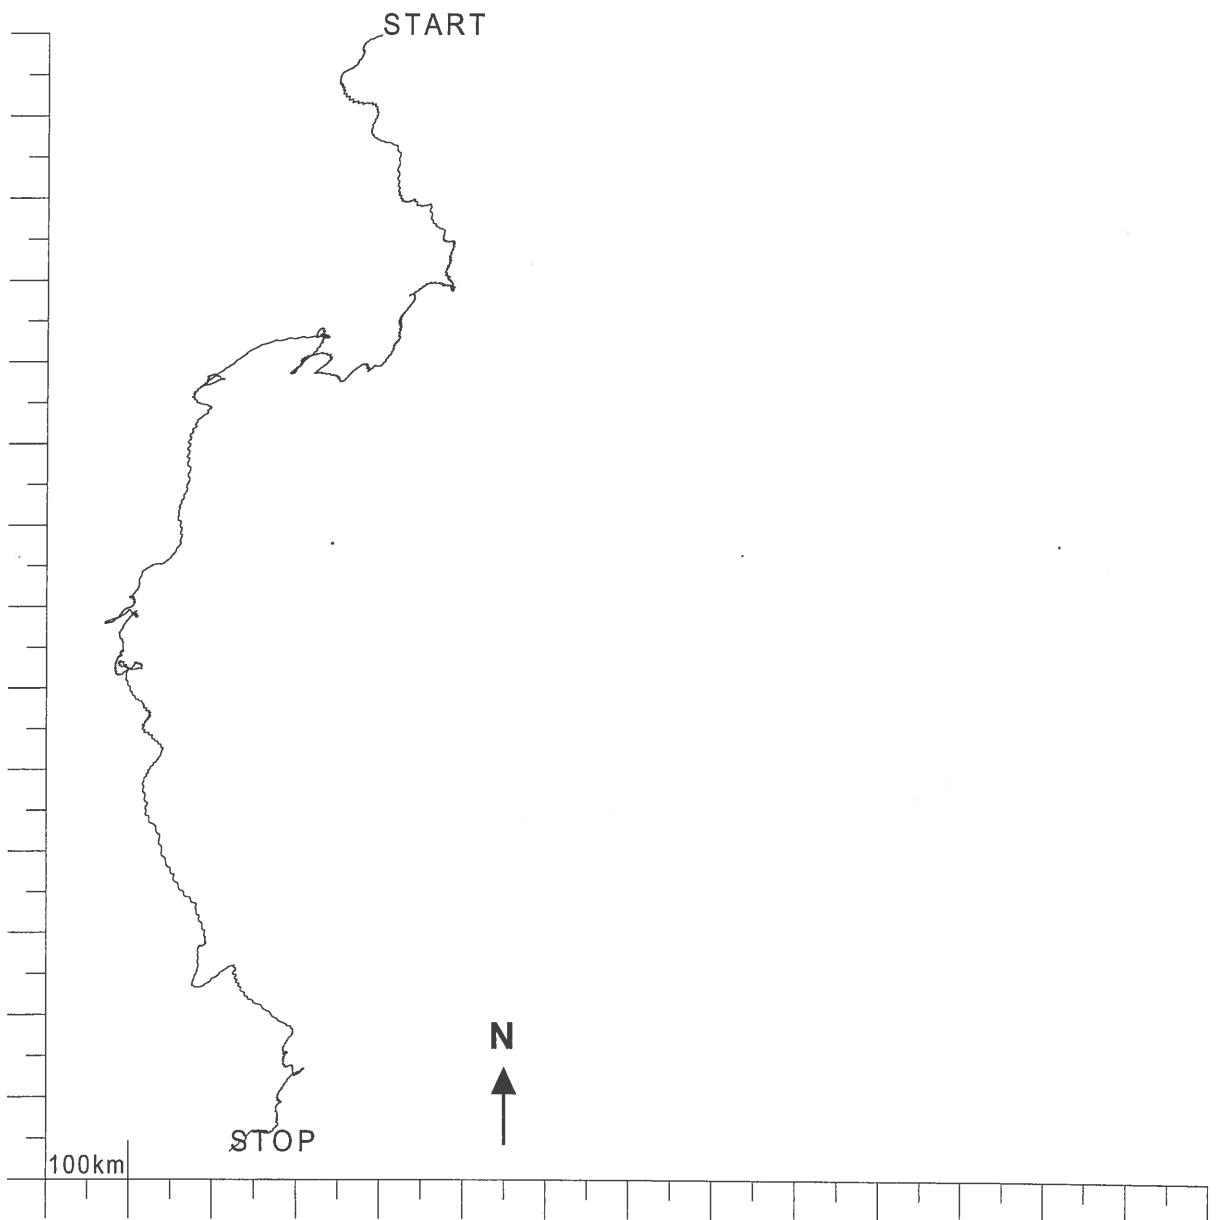

NWSC9708
Instrument: Aanderaa 10067

Progressive vector diagram

NWSC9708

Deployment Id: NWSC9907

Latitude: 60°33.960'N

Longitude: 004°45.981'W

Echo sounding depth: 1081m

Bottom depth corr.: 1071m

Time of deployment: 04/07 -1999 1950UTC

Time of recovery: 19/06 - 2000 0730UTC

ADCP:

Instrument no.: RDI ADCP 1578

Instrument frequency: 75kHz

Height above bottom: 414m (corr.)

Depth: 657m (corr.)

Time of first data: 04/07 - 1999 2020UTC

Time of last data: 20/06 - 2000 0700UTC

Sample interval: 20 min

No. of ensembles: 25305

Pings per ens.: 1

Binlength: 25m

Depth of first bin: 621m (corr.)

No. of bins: 25

Aanderaa:

Instrument no.: RCM9 196

Height above bottom: 307m

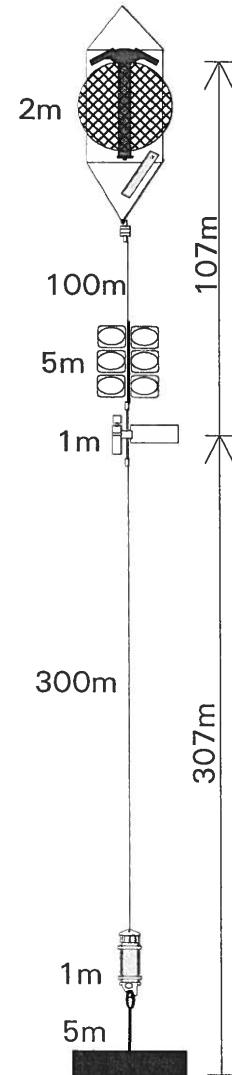

Depth: 764m (corr.)

Time of first data: 04/07 – 1999 2029 UTC

Time of last data: 20/06 – 2000 0629 UTC

Sample interval: 60 min

No. of records: 8435

Deployment: NWSC9907 analyzed from beginning to end
 Instrument no.: 196
 Instrument type: Aanderaa
 Latitude: 60 33.960 N
 Longitude: 04 45.981 W
 Bottom depth: 1071
 Instrument depth: 764
 Number of records: 8435
 Time of first record: 1999 07 04 20 29
 Time of last record : 2000 06 20 06 29
 Time between records (min.): 60.000

Parameters	Records OK	Records flagged
Column 1 : Recno		
Column 2- 4: Date		
Column 5- 6: Time		
Column 7 : Temp	8435	0
Column 8 : Speed	8435	0
Column 9 : Direct	8435	0
Column 10 : Salt	8434	1
Column 11 : Turb	8435	0

Comments

Salinity is not calibrated and absolute values are not reliable.
 The time-tag clock in the instrument is drifting slightly so the actual time
 for the last record is 2000 06 20 06 26.

Residual current: 30 mm/sec towards: 215 degrees

TIDAL ANALYSIS
