

Saithe (*Pollachius virens*) in Division 5.b (Faroes grounds)

ICES advice on fishing opportunities

ICES advises that when the MSY approach is applied, catches in 2022 should be no more than 37 444 tonnes. ICES is not in a position to advise on the corresponding level of fishing effort.

Stock development over time

ICES assesses that fishing pressure on the stock is above F_{MSY} and F_{pa} and below F_{lim} , while spawning-stock size is above MSY $B_{trigger}$, B_{pa} , and B_{lim} .

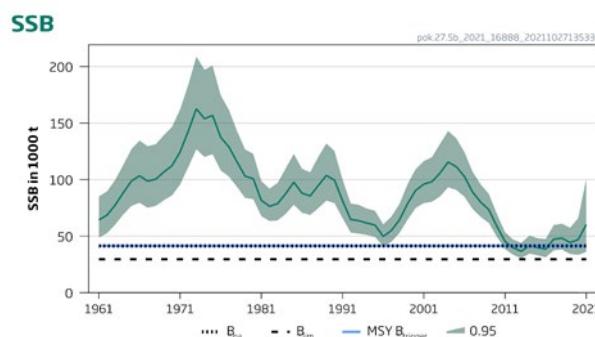

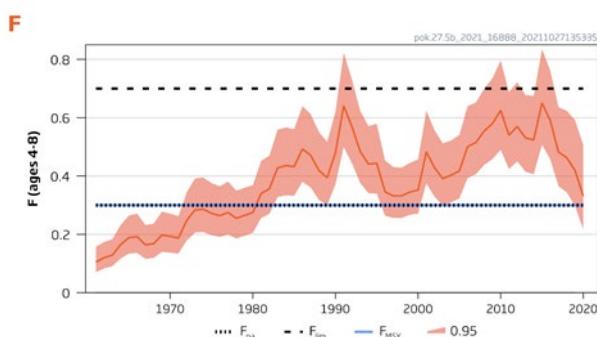

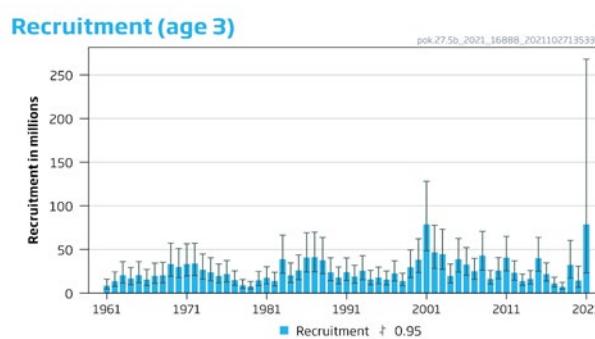

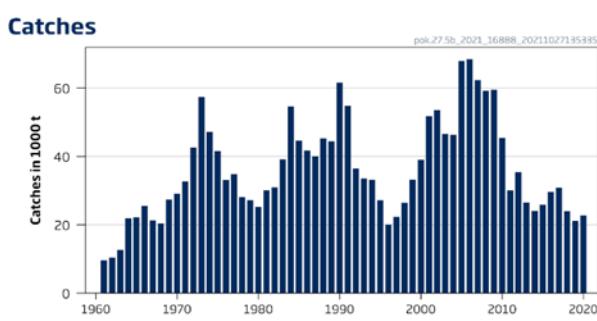

Figure 1 Saithe in Division 5.b (Faroes grounds). Summary of the stock assessment. Catches, recruitment, fishing mortality (F), and spawning-stock biomass (SSB).

Catch scenarios

Table 1 Saithe in Division 5.b (Faroes grounds). Assumptions made for the interim year and in the forecast.

Variable	Value	Notes
$F_{ages\ 4-8}\ (2021)$	0.20	Based on catch estimate of 15663 tonnes in 2021
SSB (2022)	89084	Based on $F = 0.20$; tonnes
$R_{age\ 3}\ (2022\ and\ 2023)$	14498	Median of resampled estimates 2016–2020; thousands
Landings (2021)	15663	Catch estimate for 2021 based on catch statistics to the end of September extrapolated to the entire year; tonnes
Discards (2021)	0	Discard is considered negligible; tonnes

Table 2 Saithe in Division 5.b (Faroes grounds). Annual catch scenarios. All weights are in tonnes.

Basis	Catch (2022)	F ₄₋₈ (2022)	SSB 2023	% SSB change*	% advice change**
ICES advice basis					
MSY approach: F _{MSY} = 0.30	37444	0.30	110756	24%	37%
Other scenarios					
F = 0	0	0	140946	58%	-100%
F = F ₂₀₂₁	26037	0.20	119854	35%	-4.9%
F = F _{pa}	37444	0.30	110756	24%	37%
F = F _{lim}	74675	0.70	80522	-10%	173%

* SSB (2023) relative to SSB (2022) (89 084 tonnes).

** Advice value for 2022 relative to the advice value for 2021 as issued in 2020 (27 368 tonnes).

The catch advice for 2022 is higher compared to the advice for 2021 due to the higher estimate of biomass.

Basis of the advice

Table 3 Saithe in Division 5.b (Faroes grounds). The basis of the advice.

Advice basis	MSY approach
Management plan	A management plan (Anon., 2019) was implemented in 2021, but ICES has not been requested to evaluate it

Quality of the assessment

There is a tendency for the assessment to result in overestimates of biomass and underestimates of fishing mortality which may indicate model or data issues. The estimate of F in 2019 has been revised upwards in the 2021 assessment compared to the assessment conducted in 2020.

The estimate of recruitment in 2021 is the second highest in the time-series, and it is associated with very large confidence intervals.

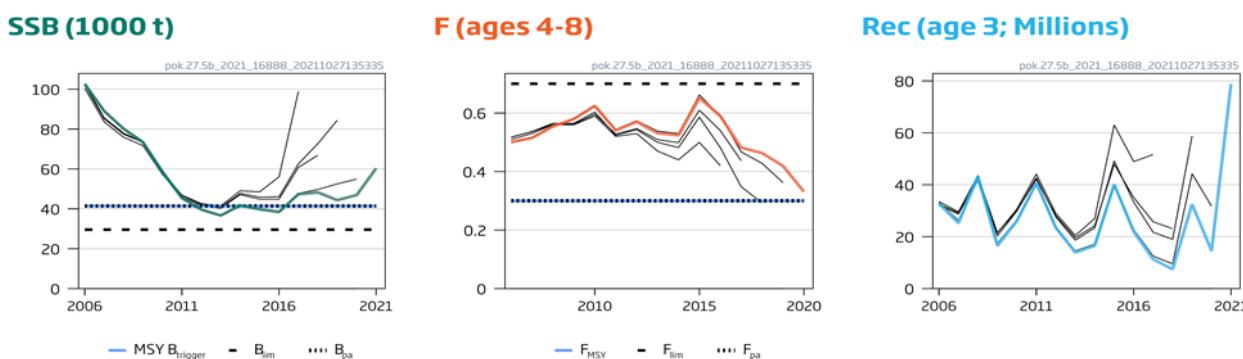

Figure 2 Saithe in Division 5.b (Faroes grounds). Historical assessment results. Results of the last five assessments are plotted, with the solid coloured line representing the current assessment.

Issues relevant for the advice

In 2021 the Faroese authorities implemented a management plan (Anon., 2019) with a control rule that regulates the number of fishing days for cod, haddock, and saithe in the Faroe Plateau fishery. The management plan has not been evaluated by ICES and therefore ICES bases its advice on the MSY approach.

ICES cannot quantify the relationship between effort and F for this stock.

Reference points

Table 4 Saithe in Division 5.b (Faroes grounds). Reference points, values, and their technical basis. All weights are in tonnes.

Framework	Reference point	Value	Technical basis	Source
MSY approach	MSY $B_{trigger}$	41400	B_{loss} (SSB in 2013).	ICES (2017)
	F_{MSY}	0.30	Stochastic simulations, capped by F_{P05}	ICES (2017)
Precautionary approach	B_{lim}	29571	$B_{pa}/1.4$	ICES (2017)
	B_{pa}	41400	B_{loss}	ICES (2017)
	F_{lim}	0.70	Stochastic simulations; the F that gives a 50% probability of $SSB > B_{lim}$.	ICES (2017)
	F_{pa}	0.30	F_{P05} , stochastic simulations (ICES, 2017): the F that leads to $SSB \geq B_{lim}$ with 95% probability	ICES (2017, 2020)*
Management plan	SSB_{mgt}	Not applicable		
	F_{mgt}	Not applicable		

* In 2020 both the technical basis and the value of F_{pa} were revised.

Basis of the assessment

Table 5 Saithe in Division 5.b (Faroes grounds). Basis of the assessment and advice.

ICES stock data category	1 (ICES, 2021a)
Assessment type	State-space model (SAM) using catches in the model and in the forecast (ICES, 2021b)
Input data	Commercial catches (mainly Faroese catches, ages and length frequencies from catch sampling); Faroese bottom-trawl surveys FO-GFS-Q1 (G1264) and FO-GFS-Q3 (G3284); annual maturity data from FO-GFS-Q1 (G1264); natural mortality set at $M = 0.2$
Discards and bycatch	Discarding is considered negligible
Indicators	None
Other information	A benchmark assessment was performed in 2017 (WKFAROE; ICES, 2018)
Working group	North-Western Working Group (NWWG)

History of the advice, catch, and management

Table 6 Saithe in Division 5.b (Faroes grounds). ICES advice, TACs, and catch. All weights are in tonnes.

* No official catches reported.

** Quantity unknown 1989–1991.

*** Catches up to 1990 are from USSR and from the Russian Federation since 1991.

^ The 2001–2008 catches from Faroe Islands, as stated by the Faroese coast guard, have been corrected to be consistent with procedures used in previous years.

^^ Includes catches from Subdivision 5.b.2 and Division 2.a in Faroese waters.

^^^ Includes French, Greenlandic, and Russian catches from Division 5.b, as reported to the Faroese coast guard.

Includes Faroese, French, and Greenlandic catches from Division 5.b, as reported to the Faroese coast guard.

Catches from Germany in 1989 and 1990 are sum of catches from the German Democratic Republic and the German Federal Republic

Summary of the assessment
