

Saithe (*Pollachius virens*) in Division 5.b (Faroes grounds)

ICES advice on fishing opportunities

ICES advises that when the maximum sustainable yield (MSY) approach is applied, catches in 2025 should be no more than 24 281 tonnes. ICES is not in a position to advise on the corresponding level of fishing effort.

Non-fisheries conservation considerations

ICES has not identified any conservation aspects other than those relating to the commercial fisheries.

Stock development over time

Fishing pressure on the stock is below F_{MSY} , and spawning-stock size is above MSY $B_{trigger}$, B_{pa} , and B_{lim} .

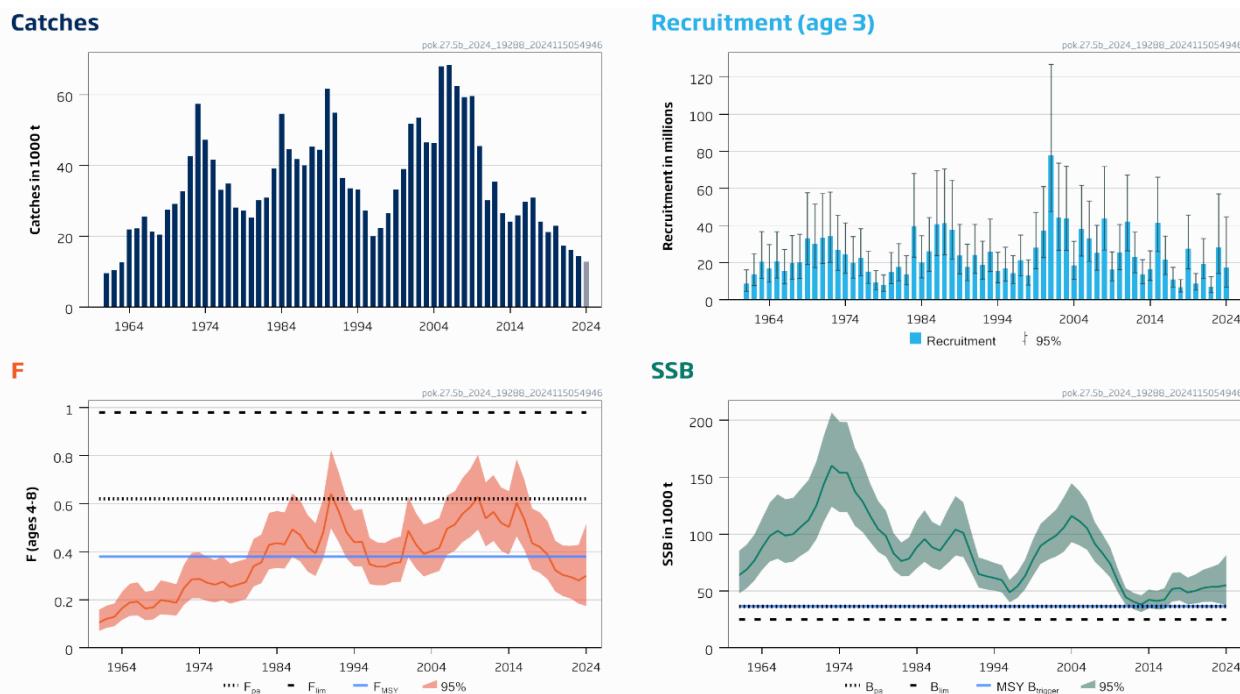

Figure 1 Saithe in Division 5.b (Faroes grounds). Summary of the stock assessment. Catches in 2024 are estimated for the full year based on reported catch in Q1 - Q3, and used in the assessment to produce an estimate of F in 2024.

Catch scenarios

Table 1 Saithe in Division 5.b (Faroes grounds). Assumptions made for the interim year and in the forecast.

Variable	Value	Notes
$F_{ages\ 4-8}\ (2024)$	0.31	Based on catch estimate of 12708 tonnes in 2024
SSB (2025)	67335	in tonnes
$R_{age\ 3}\ (2025\ and\ 2026)$	19489	Median of resampled estimates 2019–2023; in thousands
Landings (2024)	12708	Catch estimate for 2024 based on catch statistics to the end of September extrapolated to the entire year; in tonnes
Discards (2024)	0	Discarding is considered negligible; in tonnes

Table 2 Saithe in Division 5.b (Faroes grounds). Annual catch scenarios. Weights are in tonnes.

Basis	Catch (2025)	F ₄₋₈ (2025)	SSB (2026)	% SSB change*	% advice change**
ICES advice basis					
Maximum sustainable yield (MSY) approach: F _{MSY} = 0.38	24281	0.38	71896	7	58
Other scenarios					
F = 0	0	0	94005	40	-100
F = F ₂₀₂₄	20178	0.306	75489	12	32
F = F _{pa}	35686	0.62	61265	-9	132
F = F _{lim}	49187	0.98	49629	-26	221

* SSB (2026) relative to SSB (2025) (67 335 tonnes).

** Advice value for 2025 relative to the advice value for 2024 as issued in 2023 (15 323 tonnes).

The catch advice for 2025 is higher compared to the advice for 2024 because of increasing stock biomass and increasing recruitment.

Basis of the advice

Table 3 Saithe in Division 5.b (Faroes grounds). The basis of the advice.

Advice basis	Maximum sustainable Yield (MSY) approach
Management plan	A management plan (Fiskidagaskipan og umsitingaráætlan, 2019) was implemented in 2021, but ICES has not been requested to evaluate it

Quality of the assessment

The assessment in 2024 produces estimates of F and SSB that are similar to the 2023 assessment. There have been large changes in estimates of recruitment between assessments.

The relationship between catches from January to September and total year catch gives a preliminary estimate of catch in 2024 that is well below the ICES advice.

Starting with the summer survey in 2021, there was a change in survey vessel and a further change in survey footgear in the summer 2024 survey. The indices have not been adjusted for these changes. The impact of these changes is unknown and should be explored.

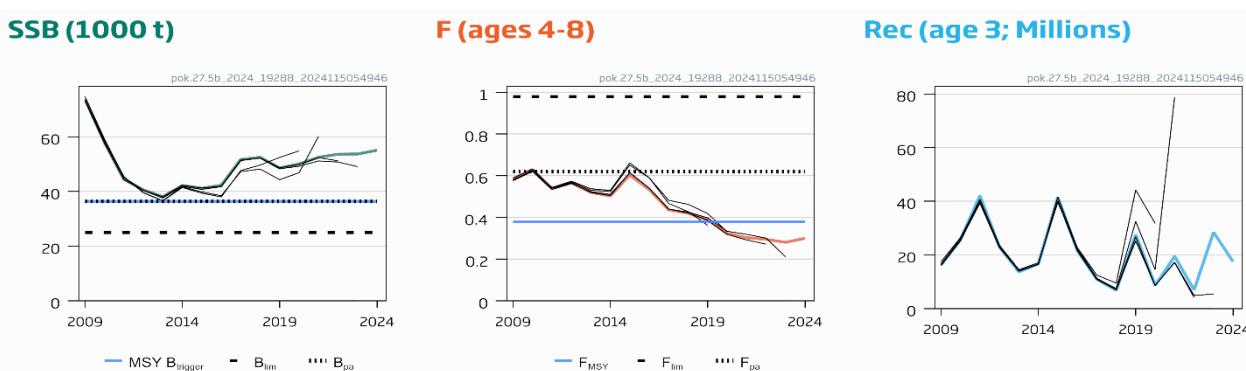

Figure 2 Saithe in Division 5.b (Faroes grounds). Historical assessment results. Results of the last five assessments are plotted, with the solid coloured line representing the current assessment. The plot does not show the line for fishing mortality that ends in 2021 because this year's assessment estimated fishing mortality in the current year (year y), while the last year in previous assessments was the last full calendar year (year y-1). The final year F in 2024 for the current assessment is based on estimated catch.

Issues relevant for the advice

In 2021, the Faroese authorities implemented a management plan (Fiskidagaskipan og umsitingarætlan, 2019) with a control rule that regulates the number of fishing days for cod, haddock, and saithe in the Faroe Plateau fishery. The management plan has not been evaluated by ICES; therefore, ICES bases its advice on the MSY approach.

ICES cannot quantify the relationship between effort and F for this stock.

There have been a number of lower recruitments in the past 10 years.

Catches have been below the ICES advice since 2011.

Reference points

Table 4 Saithe in Division 5.b (Faroes grounds). Reference points, values, and their technical basis. Weights are in tonnes.

Framework	Reference point	Value	Technical basis	Source
Maximum sustainable yield (MSY) approach	MSY $B_{trigger}$	36 412	B_{loss} (SSB in 2013)	ICES (2022)
	F_{MSY}	0.38	Stochastic simulations	ICES (2022)
Precautionary approach	B_{lim}	24 990	$B_{pa}/\exp(1.645 \times \sigma)$, where $\sigma = 0.228829$	ICES (2022)
	B_{pa}	36 412	B_{loss}	ICES (2022)
	F_{lim}	0.98	Stochastic simulations; the F that gives a 50% probability of SSB > B_{lim}	ICES (2022)
	F_{pa}	0.62	F_{P95} , stochastic simulations (ICES, 2022); the F that leads to SSB ≥ B_{lim} with 95% probability	ICES (2022)
Management plan	SSB_{mgt}	Not applicable		

Basis of the assessment

Table 5 Saithe in Division 5.b (Faroes grounds). Basis of the assessment and advice.

ICES stock data category	1 (ICES, 2023)
Assessment type	State-space model (SAM) using catches in the model and in the forecast (ICES, 2024).
Input data	Commercial catches (mainly Faroese catches, ages and length frequencies from catch sampling); Preliminary estimate of catch-at-age in the year (January to September) in which the assessment is carried out; Faroese bottom-trawl surveys FO-GFS-Q1 (G1264) and FO-GFS-Q3 (G3284); annual maturity data from FO-GFS-Q1 (G1264); natural mortality set at M = 0.2
Discards and bycatch	Discarding is considered negligible
Indicators	None
Other information	An interbenchmark assessment was performed in 2022 (ICES, 2022)

History of the advice, catch, and management

Table 6 Saithe in Division 5.b (Faroes grounds). ICES advice, total allowable catches (TACs), and catch. Weights are in tonnes.

Year	ICES advice	Catch corresponding to advice	Agreed TAC*	ICES catch
1987	No increase in F	< 32000		40020
1988	No increase in F	< 32000		45285

* No official catches reported.

** Quantity unknown 1989–1991.

*** Catches up to 1990 are from USSR and, since 1991, from the Russian Federation.

^ Includes catches from Division 2.a in Faroese waters, as reported to the Faroese Coast Guard.

Catches from Germany in 1989 and 1990 are sum of catches from the German Democratic Republic and the German Federal Republic.

Summary of the assessment

Table 9 Saithe in Division 5.b (Faroes grounds). Assessment summary. Weights are in tonnes, recruitment in thousands.
